

Challenge: PetFeed

Write a small App which fetches images of pets from a REST API and displays them in an image feed.

Rest-API to use: <https://shibe.online>

Core features:

1. Images are loaded from the server.
2. Tapping on an image opens it in the image viewer, full screen on black background.
3. An image can be marked as favorite in the feed by tapping on the heart icon.
4. An image can be marked as favorite in image viewer.
5. In a TabBar, the user can switch between viewing all posts and only their favorite posts.
6. Favorite pictures are saved so that they can be viewed even after app restart.

Other requirements:

- Data saving
- Clean, maintainable, testable code-structure
- Unit-Tests
- Local version-control via git
